

# Cell Organelle Facebook Page

Kelly Ryan

Your goal is to create a fictitious Facebook page for a particular cell organelle that will be assigned to you by your teacher.

Your page **must** include the following information:

1. **A profile picture:** can be realistic or more like a cartoon.
2. **Work information:** what is your job in the cell ? Use new vocabulary words from your note pack. Try to relate to an actual job.
3. **Personal information:** Choose **two** of the topics below and come up with actual or fictitious responses for them. Be sure they are related to what your organelle might actually be interested in.

\*Interests and activities

\*Favorite music, songs

\*Favorite TV shows

\*Favorite movies

\* Favorite books

example: ribosomes synthesize (build) proteins , so an activity may be playing ( building) with Legos and a favorite TV show might be "Bob the Builder"

4.**Friends** : You will be given 2 friend suggestions ( other organelles). You must explain why you and this friend would get along- how could you and your friend interact together in the cell ? What activities will you do together? Use your note pack to help with this !!! Be sure you are scientifically accurate.

**Be creative and have fun !**
